

Let me explain the briefly:

To run the angular project first we need to setup the requirements

- 1.Install Node.js
- 2.Install Angular Cli---(Command)-->npm install -g @angular/cli
- 3.Create a new angular project---(command)-->ng new my-angular-app
- 4.Navigate to the folder .After that
- 5.Run the Application--- ng serve --open

In the sample project

- 6.there are some components like Customer,Order,About,Login,And Home.
- 7.We use the routing between the components to navigate and uses some CSS and HTML tags to improve the effectiveness of the page.
